Qué es un Container?

- Es una unidad de software que contiene un programa y todas las dependencias necesarias para su funcionamiento.
- Introduce una abstracción que garantiza el funcionamiento del programa independientemente de las características del ambiente en el que se encuentre el container.
- Aisla al programa del entorno en que se ejecuta.

Make Titles Informative.

You can create overlays. . .

- using the `pause` command:
 - First item.
 - Second item.
- using overlay specifications:
 - First item.
 - Second item.
- using the general `uncover` command:
 - First item.
 - Second item.
